UNILOCK®

What do you see when you look at
a backyard, front porch, or driveway?

At Unilock, we see possibilities.

Possibilities to build works of art and personal
playgrounds. Possibilities to bring families together
for a birthday barbecue or a wedding reception.
Possibilities to transform your imagination into
remarkable outdoor spaces, and build connections
stronger than the concrete underfoot.

And we don't let possibilities go to waste. Built on
more than 50 years of innovation and sustainability,
we provide customers the tools to transform dreams
into reality. We connect you with proven contractors
and supply an endless canvas of materials, but the
final product is always uniquely yours. And when your
project is complete, you don't just have something
beautiful, you've changed the way you see the world.

So, where can you see possibilities, and how can we
help you build them?

Transforming Hardscapes

"Our contractor's mock-up helped us visualize the backyard, but the final result still exceeded our expectations!"

John & Kiki

Lake home backyard goes from drab to fabulous

The walls of windows in this two-level home invited the sun to stream in and offered sweeping views of beautiful Lake Mendota in Wisconsin. But the original backyard was uninspiring, with a small, brown-toned brick patio and underutilized space that did little to enhance this incredible setting.

New owners, John and Kiki had a different vision for their all-season family retreat. They wanted to make full use of their backyard by creating a contemporary, functional living space designed to maximize enjoyment of their spectacular lakeside vista. What they got, exceeded their expectations.

Before and After

A grand, art-deco-style staircase was constructed with Unilock steps providing easy access to the beckoning waters below.

Today, an expansive Unilock Arcana™ patio encompasses a dining area, plenty of relaxed seating, and a fire bowl lounge, creatively highlighted with a contrasting tone of hexagonal Umbriano® pavers in French Grey. The existing retaining wall was replaced with a Unilock wall featuring stepped garden boxes filled with lush greenery, for a natural, cozy ambiance.

Given the home's proximity to the lake, pavers were laid on a permeable base with larger joint spacing filled with permeable resin sand to assist with water management in the event of flooding. This proved a wise move, as some flooding has occurred since the build with the paver project holding steadfast.

In place of the old, sloped flagstone pathway, a grand, art-deco-style staircase was constructed with Unilock steps providing easy access to the beckoning waters below.

D&B Landscaping Services Inc.,
in collaboration with Aniascape LLC

Best in Show Winner

The homeowners
envisioned a
sprawling, Miami
resort-inspired
backyard patio.

The owners of this modern home envisioned a sprawling, Miami resort-inspired backyard patio. To bring this vision to life, they collaborated with Manuel Hernandez of D&B Landscaping and Ania Rossi of Aniascape LLC, who used Unilock® Uvision® 3D Landscape Creator to craft the initial design plan.

Given the narrower lot, Ania and Manny chose Beacon Hill™ Smooth XL slabs in Fossil, to create an expansive, upscale look and feel. Beacon Hill XL in a stacked bond pattern forms a clean, minimalist foundation for the patio, while smaller units used for the step risers provide a cohesive light tone

throughout. The risers are crowned with Architectural™ Coping in Charcoal, adding visual contrast to the lighter hues, while complementing the home's darker roof and window accents.

The upper patio features an outdoor kitchen built with U-Cara® Smooth in Granite Fusion, bar seating, and a dining nook perfect for alfresco meals. A nearby lounge area faces a built-in TV wall, seamlessly blending indoor and outdoor spaces.

Near the pool's edge, two fire tables with matching U-Cara Smooth panels, Architectural coping, and a row of beach loungers complete the serene setting.

Each product chosen was manufactured with EnduraColor™ technology for long-lasting color and durability, helping to transform this breathtaking patio into a space for cherished memories filled with laughter and love.

"The XL size of Beacon Hill provided the right aesthetic look to create a nice expansive patio space for the homeowner"

Ania Rossi

Products

Capture the eye with
exclusive products

From weathered cobblestone to contemporary linear, our product selection reaches beyond the horizontal to include garden walls, pillars, steps, fire tables and fountains. Rock the look that is unmistakably you, and undeniably Unilock!

Select your Color

Begin by identifying the colors that resonate with you. Consider the mood you want to create, while still complimenting the exterior of your house. Calming blues, vibrant reds or earthy neutrals.

TREND WATCH

Warm neutral tones and understated designs are trending, with monochromatic palettes favored over high-contrast colors. Large-format, light-colored pavers are popular for their refined, contemporary look. Check out our new color Oat Beige!

Choose your Shape

What will you create?

Let your imagination run wild in the playground of Unilock paving products! From traditional squares, to modern planks, geometrics and timeworn historic shapes, the choices are many. Consider combining multiple shapes to give your project added depth.

TREND WATCH

There's a growing trend of mixing materials to soften hard surfaces, such as combining artificial turf between pavers.

Discover your **Style**

ULTRA-MODERN

HISTORIC

TRADITIONAL

CONTEMPORARY

Whether you're designing a quaint backyard refuge or an ultra-modern driveway, we have a variety of paving products that'll turn your outdoor space into a little slice of heaven.

TREND WATCH

Turning functional spaces like driveways and walkways into style statements is on trend.

Pick your Pattern

From herringbone to basket weave, the right angle can make all the difference! A Unilock Authorized Contractor can recommend the best laying patterns based on the products you choose.

RANDOM

LINEAR

DESIGNER

STACKED

BASKET WEAVE

HERRINGBONE

THINK OUTSIDE THE BOX

A change in laying pattern can help define distinct "rooms" that will make your outdoor space feel larger.

Visit Unilock.com for laying patterns.

Find your **Finish**

TREND WATCH

Layering different finishes for a mixed-material look helps add visual interest and make your project feel more polished.

Unilock Finishes

When considering the finish, think about the look you are trying to achieve as well as practical performance. From traditional smooth and flagstone, to enhanced surfaces, modern granite looks and timeworn patina, Unilock offers it all.

SMOOTH FINISH

Sometimes, simple is best. A smooth surface suits contemporary styles and is available in a wide variety of shapes for paving and verticals.

FLAGSTONE FINISH

Popular for centuries, a flagstone finish never fails to add warmth to outdoor spaces.

ANTIQUED FINISH

A variety of methods are used to achieve this distressed finish, but in every case, it lends a relaxed, rustic vibe.

TIMEWORN

Our exclusive Elegance line offers the look of centuries-old cobblestone, brick, and natural stone with unsurpassed product durability.

BRUSHED FINISH

Only Unilock offers Il Campo®, a unique surface enhanced with graphically interesting etched lines. This finish has long been a favorite of commercial designers.

UMBRIANO

Umbriano is an exclusive finish only available from Unilock with color and granite particles that are randomly dispersed to achieve a unique mottled surface that is reminiscent of granite.

EXPOSED GRANITE

Granite, Quartz and Marble particles are embedded in the product's surface and then revealed using additional processing methods.

ENHANCED SURFACE

The surface of these products is enhanced using a special process to reveal a variety of distinctive colors and textures.

Get Creative

Let your creativity shine! Unilock border and banding options can enhance your distinctive designs and add touches of elegance to your project.

JOINT MATERIAL

Joint material plays an important role between pavers by keeping out weeds and other debris. However, the color you choose can also dramatically impact the look of your project. Your contractor can help you decide what will work best.

Experiment with bold shapes and striking patterns. Design a driveway with vibrant color contrasts, or add dimension to vertical features with textures that truly stand out.

Break the mold and bring your space to life by pairing dark field pavers with light accent pavers for added drama.

Don't settle for less

The majority of your project's cost lies beneath the surface, in labor and base materials, so don't be tempted to compromise on the product you choose for its surface. Invest in a look you really love, with high quality Unilock products and technologies, so you'll be able to fully enjoy your project for years to come.

Small upgrade - **Big** difference

- ✓ Reduced dirt absorption
- ✓ Enhanced surface color
- ✓ More resistant to wear
- ✓ Stains less likely to develop

See how
it works

Color that Lasts

Traditional pavers can appear to fade over time as the surface wears to reveal large, lighter colored structural aggregates.

EnduraColor products are different.

A two-step manufacturing process uses concentrated color and wear-resistant materials to produce a refined, color-dense surface that lasts.

ENDURACOLOR™

In 2021, Unilock announced its commitment to becoming a carbon neutral company.

Paving a **greener** way

How can you make your project more sustainable?

Make it Permeable

Permeable pavers allow rainwater to flow through the pavement surface and back into the subsoil below, filtering out contaminants that could otherwise flow into stormwater drains and pollute local waterways.

Shop Locally

Choosing products that are manufactured at a Unilock facility close to your home reduces carbon emissions associated with transportation.

Think Lighter

Products that are lighter in color, have a higher solar reflectance. When you choose a lighter colored product, more of the sun's energy is reflected and less heat is absorbed into the pavement surface. This helps reduce urban 'heat island effect' and carries a number of environmental benefits.

We have implemented initiatives that continue to minimize our use of fossil fuels, conserve water and replace cement in our products, while producing the highest quality product.

Learn
More

Revolutionary EcoTerra technology offers a sustainable paving solution with its cement-free face-mix. It provides high compressive strength, low absorption, and remarkable colorfastness, all while contributing up to a 15% reduction in carbon dioxide emissions. Additionally, EcoTerra products are designed to be free of efflorescence.

2020 winner
Innovative
Product

Permeable Pavements

Unilock introduced the first permeable paver to North America in 1991. Long used to manage water in commercial projects, in recent years, increased storm events and residential flooding have motivated more and more homeowners to install permeable pavers in their own projects.

At first glance, permeable pavers look similar to traditional pavers. The difference lies in the width of the joint between units, the material used to fill the joints, and the base upon which the pavers are installed. Wider joints, permeable joint material and an open graded base design all work together to direct water through the surface and into the subsoil below, instead of flowing off the surface and into overburdened storm sewer systems.

Special materials are used in the joints and in the permeable base below, to encourage water to flow through.

Some homeowners install rainwater collection systems underneath their paver projects to supply water to in-ground sprinkler systems.

Permeable Paver Benefits

Reduced Flooding

Storm sewers are less likely to overflow when more rainwater flows through the pavement surface.

Improved Filtration

Road salts, pesticides, oil and other harmful pollutants are naturally filtered through a permeable system before they reach rivers and lakes.

Increased Square Footage

Installing a permeable driveway can enable homeowners who live in regions where the ratio of impervious lot coverage is restricted, to install new landscape features such as a pool.

Safety

Decreased puddling on the surface of permeable pavement will reduce ice build-up in winter.

Long-term Savings

Rainwater collection systems beneath pavers can reduce the expense of water used for irrigation and may be eligible for tax credits and subsidies.

Keep an eye out for our permeable icon throughout our product pages.

While all segmental paving can be permeable to some degree, these products feature special spacer bars that promote exceptional flow-through.

U-Cara® Modular System

Our U-Cara Modular System offers a variety of aluminium frames that can be mixed and matched to construct vertical features like grill islands, fire features and pillars.

Speak to your contractor to select a design and a U-Cara fascia panel finish to suit your project.

U-Cara® Wall Mount System

The U-Cara Wall Mount System allows you to put the finishing touches on your project by cladding existing structures with U-Cara fascia panels.

Ideal for garden sheds, wing walls, exposed foundation, existing steps or concrete and wood substrates.

Fire Pits and Fire Features

Imagine flames crackling on a cool night, curling up under the stars with friends and family, and sipping a warm cup of hot chocolate. Soak up that sense of bliss from your backyard with a Unilock fire pit!

HEAT DAMAGE PREVENTION

To ensure a long-lasting fire feature, direct exposure to extreme heat from an open flame should be avoided. Always construct fire features with a protective heat barrier such as a metal insert, refractory blocks or approved firebrick to prevent potential heat damage.

NOTE: Large fires and extreme heat are detrimental to concrete.

SUNSET FIRE PIT KIT

See page 158 for colors.

FIRE PIT INSERT

Fire pit insert fits securely into the fire pit. Sold separately.

PRE-BUILT ELEMENTS

TUSCANY

Pre-built elements are constructed of Brussels Dimensional Stone® with Copthorne® or Umbriano® accents. Speak to your contractor for more information.

Outdoor Kitchens

There's nothing more fun than cooking alfresco. An outdoor kitchen is an entire, defined space dedicated to preparing meals among family and friends, but with a much livelier backdrop!

Brussels Dimensional

Learn about things to consider when designing your outdoor kitchen.

U-Cara

Lineo Dimensional Stone

Design Considerations

Think about how you'll use the space, the outdoor appliances you need, the best location for a kitchen in your yard, and how it will weather in the elements over time.

From a practical side, an outdoor kitchen is an extension of your home's living and entertaining space, allowing you to make the most of your backyard.

Water Features & Pillars

From fountains and ponds, to waterfalls and custom water features, these soothing additions are a popular way to enhance your landscape design.

Elevate your outdoor space to new heights by incorporating pillars into your design. With varying heights and functions, pillars create a sense of permanence and strength while also adding visual flair. Take it a step further by incorporating landscape lighting into your pillars to set the mood at night.

Creative Ideas

The versatility of Unilock products provides a playground for your imagination. From mixing patterns and colors to create a custom sports court, to utilizing Unilock wall systems to beautify a utilitarian window well, the possibilities are endless!

This small storage area becomes a thing of beauty, paved with Unilock Beacon Hill™ Smooth and Universal Coping treads.

Steps, Treads, Coping & Caps

From classic, fullnose shapes to pitched-face edges, our steps, treads and coping offer a wide variety of choices for the finishing touch on your project.

Learn & Plan

Nothing ventured, nothing gained! Transform your hardscape ideas into bold, thrilling reality with the right help, knowledge and preparation. Unilock has the experts, the plans and the tools you need to succeed!

Finding the right Contractor

Even the best materials can be spoiled by subpar installation and craftsmanship, which is why choosing the right contractor for the job is the most crucial decision for your project. Remember that the cheapest quote is rarely the best option, so make sure to ask the right questions.

Guaranteed to do the job right.

Unilock Authorized Contractors have met our exacting standards for installation methods and business practices. Connect with us online, by phone or at one of our locations and we'll be happy to connect you with a contractor in your area who is guaranteed to do the job right. We stand behind our contractors with a 2-year workmanship guarantee.

Register online at [Unilock.com](https://www.unilock.com) and we'll match you with a Unilock Authorized Contractor in your area.

Contractor Checklist

1	Check Credentials	How long has the contractor been installing pavers and walls? Has the contractor installed projects in the past with the features you’re considering?
2	Review Portfolio	Look at their past work. Great contractors will have a number of their projects to show off. Do they offer any type of design services and what is the cost for this? Is the contractor’s style and design something you would like for your project?
3	Assess Workmanship	Ask to see a project or two that the contractor completed more than two years ago to see how their work has held up. Look for nice neat cuts and edge restraints that are still in place. Do they warranty their work? Have they had any warranty claims in the past?
4	Learn about the Crew	Some contractors will hire other companies to perform parts of the work, like lighting and irrigation. Be sure to ask how these sub-contractors will be vetted and managed.
5	Jobsite Preparation	What are the contractor’s base preparation methods? What materials are used and why? Is there a standard procedure for base preparation or will the contractor assess your site’s unique needs?
6	Schedule and Timeline	How far in advance are projects being booked and how long might your project take? What are the contractor’s payment terms? Do they require a deposit upfront to secure the timing of the project?
7	Read the Fine Print	Does the contractor have the proper licensing for their work? Does the contractor have liability insurance and are employees covered by Workers Compensation? Will permits be required for the job and if so, who is responsible to secure them?
8	Listen to your Gut	Do you like and trust this contractor? Can you communicate easily? Will the person you are meeting now be on-site throughout the project, or will there be a different daily contact? Double check your gut impression by reaching out to references.

Finished Project

While there are many contractors and designers who still prefer to draw by hand, more and more plans today are being created digitally and in 3D.

If you're having trouble imagining what your project will look like when it's complete, a 3D design can really help.

Speak to your contractor about how 3D design can help you visualize the possibilities for your project!

Connect with us online or by phone to find a qualified contractor who can prepare a 3D design for your project!

Build Basics

1 EXCAVATION

All outdoor projects should begin with the removal of grass and topsoil. The depth will be determined by two things:

1. **Soil Type** - Sandier soil requires less excavation than clay-based soil.
2. **Use** - Patios and walkways, which take lighter loads should require less excavation than driveways and retaining walls, which require deeper excavation.

Depth of excavation can be reduced significantly if a layer of DriveGrid is placed at the bottom of the excavation before gravel gets placed. Loose subsoil should always be compacted prior to installing DriveGrid and gravel.

A proper base ensures that your pavers and walls won't shift during freeze thaw cycles.

2 GRAVEL BASE

A gravel base is placed into the excavated area. Ideally, this gravel base will need to be:

- > **Strong enough** to support the weight of anything placed on the surface.
- > **Free draining** to allow water to escape the base and enter the subsoil. A perforated drain pipe in the gravel base may be necessary for retaining walls in order to direct water away from the wall's base.
- > **Extended** at least 6" (150mm) beyond the finished paver surface's edges.
- > **Compacted** in several layers, using the proper equipment.

3 BEDDING LAYER

On top of the firm gravel base, a 1" (25mm) layer of sand or tiny stone chips is spread out and smoothed. This layer enables the levelling or sloping of paver or wall units for drainage and smoothness.

Some contractors may recommend a poured concrete surface over a standard bedding layer, which is acceptable if the concrete is carefully poured and rests on a solid, well-drained base.

Note: Once concrete is poured, the height of paver or wall units can no longer be adjusted.

4 RESTRAINT SYSTEM

To prevent pavers from shifting, a concrete edge will be constructed or an edge restraint fixed with long metal spikes. For walls, adhesive can be used to secure rows of blocks together. Larger retaining walls may require geogrid every few layers to secure the wall into the soil that is being retained.

5 JOINT MATERIAL

There are three types of joint material to choose from:

Basic Jointing Sand – Years ago, this was the only joint material available. As it wears away, issues with weeds could arise. If you decide to choose basic sand, we advise using a joint stabilizing sealant and be ready to top up the sand as necessary.

Polymeric Sand – This special sand is blended with a binding ingredient to help it stay in place longer. Check with your local Unilock Dealer for the best jointing sand/compound for your project.

Resin Sand – Resin sands are the strongest jointing sand available, and have been proven to have the longest lifespan of any jointing sand. Different resin sands are available for various uses.

6 SEALING

Unilock pavers will be durable with or without a sealer. Some homeowners may choose to apply a sealer to enhance paver color, while others choose to appreciate the color of the pavers as they are. If you decide to seal, be prepared to re-seal your pavers every 3-5 years.

Factory-Sealed Products

Elegance® pavers and Unilock® pavers manufactured with EasyClean™ have been pre-sealed at the factory. To clean and brighten the surface at any time, a gentle power washing of the surface is recommended. If you wish to re-seal, wait a minimum of three years before applying sealant. Use only solvent-based sealants on factory-sealed products.

Our Quality Commitment

Unilock was the first concrete paver manufacturer in North America to offer a Lifetime Guarantee, and since then we have continued to stand behind it to ensure customers are completely satisfied with our products. With almost 2 billion stones in the ground, that's quite the commitment!

Our products are better and stronger than other brands. In fact, our internal standards of manufacturing in the USA and Canada far exceed industry standards set by ASTM (American Society for Testing and Materials) and CSA (Canadian Standards Association) and other European organizations.

LIFETIME GUARANTEE - RESIDENTIAL

Our Transferable Lifetime Guarantee warrants the structural integrity of Unilock concrete paving stones and retaining wall units when used in residential applications. It covers any structural failure or deterioration of the concrete unit resulting from normal use or from the reasonable application of sodium chloride (common rock salt used for de-icing). StoneMark™ products have the same warranties as Unilock paving stones and retaining walls, but cannot be warranted against damage resulting from de-icing products.

Any materials installed and maintained to our guidelines, and subject to normal wear, that prove defective, will be replaced without cost. Proof of purchase is required. Customers are encouraged to submit receipts to us as soon as their project is complete, using the Unilock Warranty Registration Form on our website (Unilock.com).

Purchasers need to ensure that the product they purchase is appropriate for their intended application; for example, only certain thicknesses of products are appropriate for driveways. Color matching of the replacement product and/or lost time cannot be guaranteed and labor costs related to installing replacement product is not included. Unilock reserves the right to seek a professional diagnosis and opinion to determine the exact cause of the product failure. If the failure falls within our warranty parameters, Unilock will replace the defective product.

EXCLUSIONS – Unfortunately, some things are beyond the control of Unilock, and are therefore not covered by this warranty. These include: naturally occurring efflorescence, hazing from polymeric jointing sand, scratching and chipping resulting from snow removal or construction equipment, damage caused by natural or un-natural disasters, or negligence by anyone other than Unilock. While EasyClean helps to increase a paver's resistance to staining from various substances, it does not make our products stain-proof nor does it resist every kind of stain. The Unilock warranty also does not cover deterioration or damage as a result of poor design or poor installation practices that are contrary to specifications as laid out by ICPI (Interlocking Concrete Pavement Institute) and the NCMA (National Concrete Masonry Association). For more information please visit www.icpi.org and www.ncma.org. Additionally, please refer to the Maintenance, Color and Installation Advisories.

MAINTENANCE ADVISORY

1. Cleaning and Sealing

As with anything that is outdoors, Unilock products are subject to harsh weather, dust, acid rain, leaf stains, water stains and general wear from foot or vehicular traffic. Therefore, periodic cleaning using environmentally safe detergents designed for cleaning concrete is recommended to maintain a bright, fresh appearance.

To make subsequent cleaning easier and more effective, a concrete sealer can be applied to new or cleaned products to help prevent the penetration of substances that can cause stains.

There are many types of concrete cleaners and sealers on the market. Always read the instructions carefully before using the product to make sure that it will function as expected. Testing first, in a small unobtrusive area, is always a good idea to ensure the results are acceptable. Consult your local hardscape dealer to find the products best suited for your paver or wall installation.

2. Winter Maintenance

Snow removal by way of metal blades on plows or shovels will scratch and chip the surface of pavers, causing permanent damage. To mitigate this risk, metal snow clearing blades must always have a polyurethane or rubber cutting edge attached when plowing pavers.

De-icing Salts – The use of de-icing products on paver surfaces is important for safety and to help mitigate snow accumulation. Most de-icing products will have some effect on concrete, even

Visit [Unilock.com](https://unilock.com) to register for your Transferable Lifetime Guarantee.

if the product label indicates that it is safe on concrete. If you must use a de-icing product, we recommend that you use Sodium Chloride (ordinary rock salt) or Calcium Chloride (for colder climates). Always apply sparingly. The use of de-icing products on StoneMark, wet-cast pavers, slabs or coping may damage the product and therefore is not recommended. Whenever possible use a coarse sand as an anti-slip measure instead of de-icing chemicals.

COLOR ADVISORY

1. Selection

Due to the inherently variable nature of printed materials and digital monitors, Unilock cannot guarantee that products will match the color of printed or online images. Therefore, when making final product selections, decisions should be made based on actual stones which are readily available from Unilock, Authorized Contractors or Authorized Dealers. Most Unilock products are not comprised of a single color, but rather contain blended colors for a more natural appearance. This means that there will be significant color variance from stone to stone, so purchasers should view multiple units together to get a more accurate impression of the overall color.

Note: Unilock Natural Stone variations are outside the control of Unilock. Purchasers of natural stone must be willing to accept this inherent variability.

2. Pre-installation checking

Always check the label to ensure that the Unilock product delivered to your project is the product and color ordered. If there is a discrepancy, or if the product

inside the packaging doesn't appear to be correct, contact your hardscape dealer before installing any pavers or wall units. If the product is installed, it indicates your acceptance of the products as delivered.

3. Blending

If the project requires more than one bundle of product it's always a good idea to draw product from several bundles when installing, as this ensures that any variation between bundles will be seamlessly integrated in the project. When bundles are from different production runs, random selection from multiple bundles is even more important.

4. Efflorescence

Efflorescence is a naturally occurring process that may appear as a white or light grey powder on the surface of concrete, clay or natural stone. It is temporary, and will disappear over time. However, if it is bothersome, an efflorescence cleaner can be used to remove it. There is no way to predict or prevent efflorescence. Because it does not compromise the structural integrity of the product, it is not covered by Unilock product warranties.

INSTALLATION ADVISORY

1. Construction Residue

While a certain amount of dirt on pavers and walls is inevitable during the construction phase, installers are strongly encouraged to clean as they go as construction residue can embed in the surface and become difficult to remove. The slurry produced during wet-saw cutting is particularly stubborn to clean if allowed to dry on the surface of pavers. Unilock warranties do not cover

stains caused by a failure to remove construction residue.

2. Polymeric Haze

Surface hazing caused by polymeric jointing sand is not the responsibility of Unilock. Polymeric jointing sand should only be installed by an experienced and knowledgeable contractor. Any sand that is left on the surface prior to activation will result in a haze that is very difficult and time-consuming to remove. Only the highest quality, brand name polymeric sand that is guaranteed by the manufacturer should be used.

3. Compaction Damage

Both smooth and textured paver surfaces can be scratched by compaction equipment used to 'flatten' a new paver installation. Therefore, metal plate compactors must be fitted with a polyethylene mat to protect the paver surface from becoming scratched, or a superior option is to use a rubber-roller compactor instead. Damage to product surfaces caused by failure to follow these instructions is not covered by Unilock product warranties.

FIRE PIT WARNING

Unilock warranties do not cover damage that is heat related. Wood-burning fire pits must be lined with a proper metal insert or refractory (fire-rated) brick to protect the concrete components from extreme exposure to heat. Extreme heat on a concrete surface may affect the structural integrity of the concrete and can be dangerous. The floor of the fire pit should always be constructed using refractory brick or a sand bed. For your safety, always use a spark screen over the fire.
